

RIZKY WAHYU KRISTIAWAN

ERP & System Consultant — Implementation, Infrastructure & Client Requirements

Jakarta, Indonesia • (+62) 896 0559 1892 • rizkywahyukristiawan@gmail.com • [linkedin.com/in/rizkywk](https://www.linkedin.com/in/rizkywk) • rizkywahyukristiawan.github.io

PROFILE

Technical and systems consultant with three years of hands-on QAD ERP deployment, Linux server administration, and cloud infrastructure work, now applying that same requirements-to-implementation approach to HR and payroll systems as a System Consultant at Andal. I install and configure ERP environments on-premise and in the cloud for manufacturing, pharmaceutical, chemical, and distribution clients across Indonesia and Singapore, including one full on-premise to Alibaba Cloud migration. Alongside that I work as an Odoo functional consultant and developer, gathering requirements from clients directly and building the custom modules that come out of them. I move comfortably between infrastructure, application configuration, and the client conversations that sit in front of both.

PROFESSIONAL EXPERIENCE

PT Andal Tunggal Abadi | Jakarta, Indonesia

System Consultant

2026 – Present

- Identify, analyze, and gather payroll business process requirements directly from clients implementing Andal's HR, payroll, income tax, and attendance system.
- Analyze gaps between a client's existing business processes and the system's capabilities, proposing workarounds for any limitations identified.
- Build the configuration database that serves as the foundation for each client implementation.
- Conduct User Acceptance Testing (UAT) to confirm the application operates according to client needs and the workarounds agreed in the User Requirement Document (URD).
- Feed insights on product strategy and configuration approaches back to the production team based on recurring client needs.

PT Intelegensia Mustaka Indonesia | Jakarta, Indonesia

Technical Consultant

2023 – 2026

- Installed, deployed, and configured QAD ERP for enterprise clients, covering Web UX, Web Sales, and WebServices Adapter (WSA) integration on Progress OpenEdge environments.
- Migrated a client's ERP estate from on-premise servers to Alibaba Cloud — sizing and provisioning the target environment, moving the data, and running the cutover with minimal disruption to business operations.
- Stood up on-premise ERP environments end to end for clients staying off the cloud — server installation, operating system configuration, and application setup on their own hardware.
- Administered Alibaba Cloud infrastructure day to day: server provisioning, monitoring, patching, backup routines, and capacity maintenance.
- Set up and looked after the Linux servers under each ERP deployment — Red Hat Enterprise Linux, CentOS, and Rocky Linux — covering installation, hardening, and ongoing tuning.
- Configured IPSec site-to-site tunnels connecting client on-premise networks to their cloud environments.
- Wrote Python and shell scripts to take over backups, health checks, and other routine jobs that were being done by hand.
- Worked enterprise support tickets from first report to closure — reproducing the issue, digging through application and system logs to find the pattern behind it, then either fixing it or escalating with the root cause written up.
- Diagnosed and tuned systems that were running slow or unstable, working through the stack until production was steady again.
- Sat down with clients to work through their requirements and shape the system solution that fit them, rather than handing over a standard configuration.
- Ran training and consultation sessions for client IT teams and end users so they could run the system themselves after handover.
- Wrote and kept current the technical documentation covering each ERP system and its supporting infrastructure.

Client engagements: YKK AP Indonesia · Faber Castell International Indonesia · PT Eisai Indonesia · NOK Corporation (Singapore & Batam) · PT Petro Oxo Nusantara · PT Toppan Plasindo Lestari · PT Multi Citra Rasa · PT AKR Corporindo Tbk · Sinar Baja Electric Group

PT Mega Reka Konsultan | Jakarta, Indonesia
Technical Consultant — Odoo (Freelance, alongside full-time role) 2025 – Present

- Work as both the functional consultant and the developer on Odoo customization projects, handling each one from requirements gathering through to delivery.
- Turn client business processes into system design, then test alongside the client to confirm the build matches how they actually work day to day.

Emasjid — Singapore

- Developed a custom Odoo module integrating the platform with QuickBooks, and reworked the surrounding financial and accounting workflows to match.

Vision Flight Pte Ltd — Singapore

- Developed an aircraft booking module and an aircraft maintenance log module, designing the scheduling and record-keeping logic behind both to fit aviation operating requirements.

BM Homeschooling | South Tangerang, Indonesia
IT Specialist 2018 – 2023

- Built and maintained the school's WordPress-based learning management system.
- Developed a web-based question authoring and exam-bank system using PHP Laravel.
- Contributed to cross-platform mobile application development in Flutter.
- Provided day-to-day IT support and preventive maintenance across staff PCs and mobile devices.

TECHNICAL SKILLS

ERP	QAD ERP (installation, configuration, Web UX, Web Sales, WSA), Odoo (custom module development), Epicor (project exposure), Progress OpenEdge
Cloud	Alibaba Cloud, AWS — provisioning, deployment, monitoring, on-premise to cloud migration
Systems	Red Hat Enterprise Linux, CentOS, Rocky Linux — installation, configuration, hardening, performance tuning
Networking	IPSec site-to-site VPN, secure server configuration, network and system security
Programming	Python, Shell scripting, PHP, JavaScript · Flask, Django, Laravel, Flutter
Web	HTML, CSS, JavaScript — responsive front-end development
Mobile	Flutter — cross-platform application development
Consulting	Requirements gathering, user training, troubleshooting, technical documentation, client handover

EDUCATION

Pamulang University | South Tangerang, Indonesia
Bachelor's Degree in Informatics Engineering 2019 – 2026

SMK Al Amanah | South Tangerang, Indonesia
Vocational High School — Islamic Banking 2015 – 2018

CERTIFICATIONS

- AWS re/Start Graduate — Amazon Web Services
- BNSP Certificate of Competence — Program Analyst (Analisis Program)
- BNSP Certificate of Competence — Junior Web Developer
- CompTIA Security+ — training program
- Cybersecurity Essentials and IT Essentials — Cisco Networking Academy
- Front-End Web Developer — Coding Studio

LANGUAGES

Indonesian — native · **English** — professional working proficiency
